
Introduction to Computer Forensics and Security

6G7Z1009

FAT

FAT File System

- Four parts

- Volume boot record
- File allocation tables
- Root directory
- User data area

- Types

- FAT 12, 16, 32 bits; cluster address size
- FAT1 and FAT2; first and second copy of FAT
- Floppy: FAT12

FAT12/16 Structure

DOS Boot Sector

- Usually 512 Bytes in Size.
- Contains:
 - Volume Name
 - Serial Number
 - Volume Type
 - Boot Code
 - Signature
 - ETC...

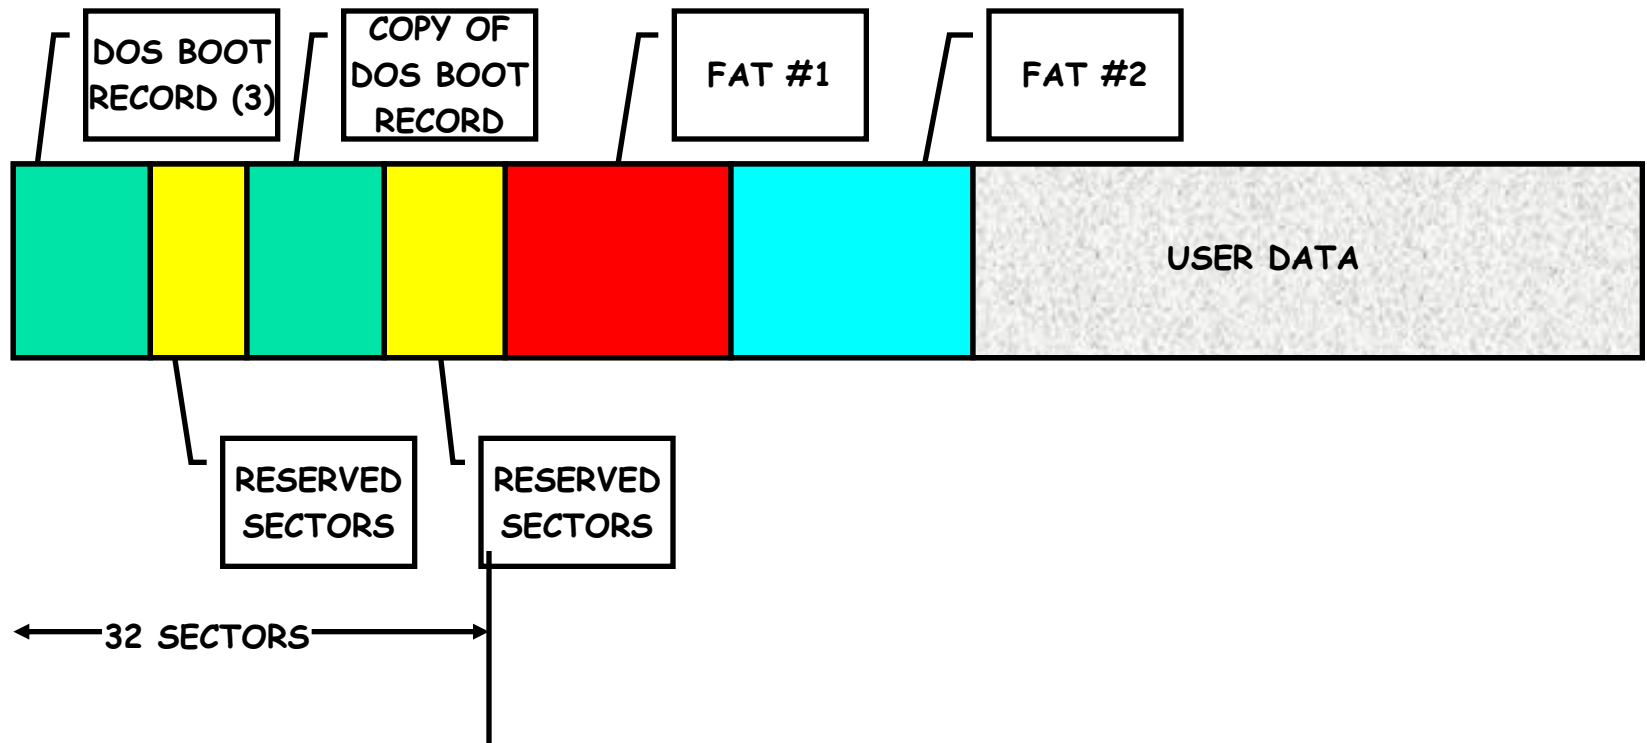

FAT 1 and FAT 2

- Tracking allocated and unallocated block/clusters on the disk.
- FAT 1 is the primary table and FAT 2 is a copy of FAT 1.

Root Directory

- Its main purpose in FAT12 and FAT 16 is holding the directory entries information for the Root folder on the disk.

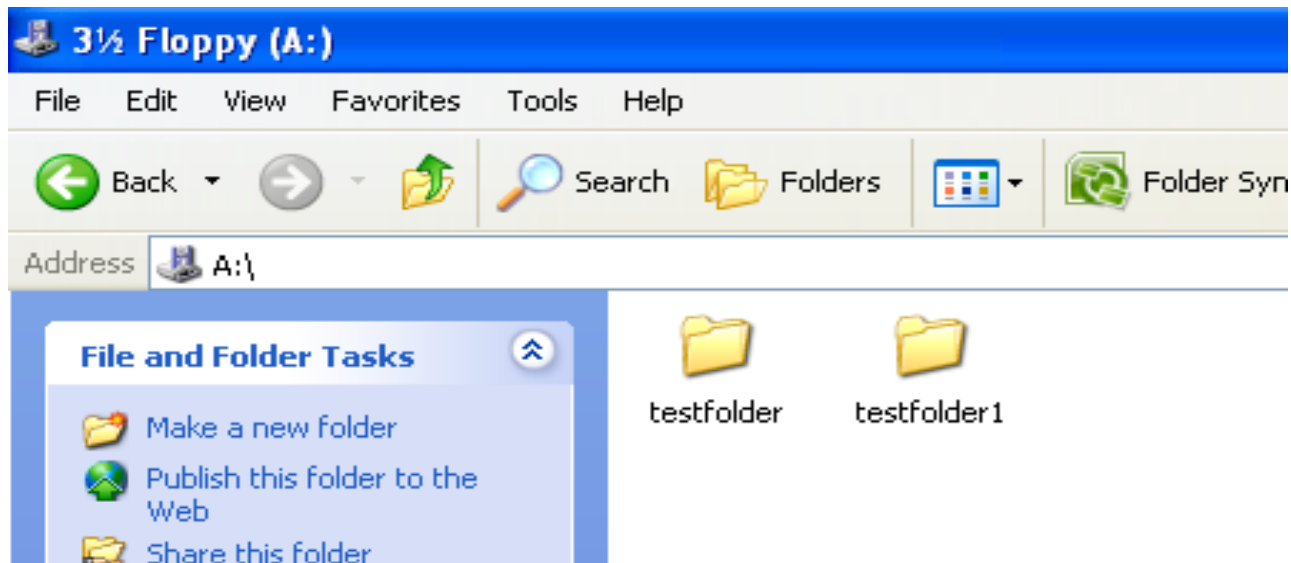

FAT32 Structure

File Allocation Table

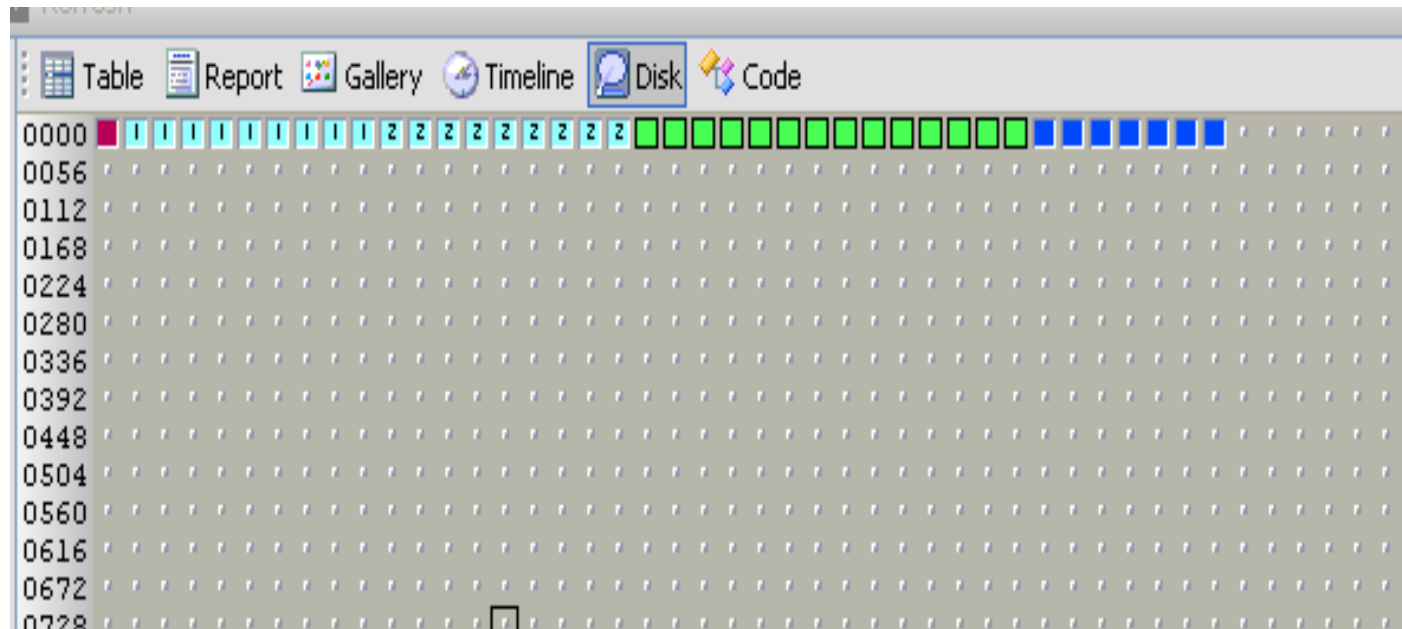

Sample FAT12/16 Disk Used

A Typical Floppy

- 1 sector per cluster
- 1 sector reserved as boot sector
- 18 sectors for FATs (9 each)
- 14 sectors for root directory

Graph Represents Sectors

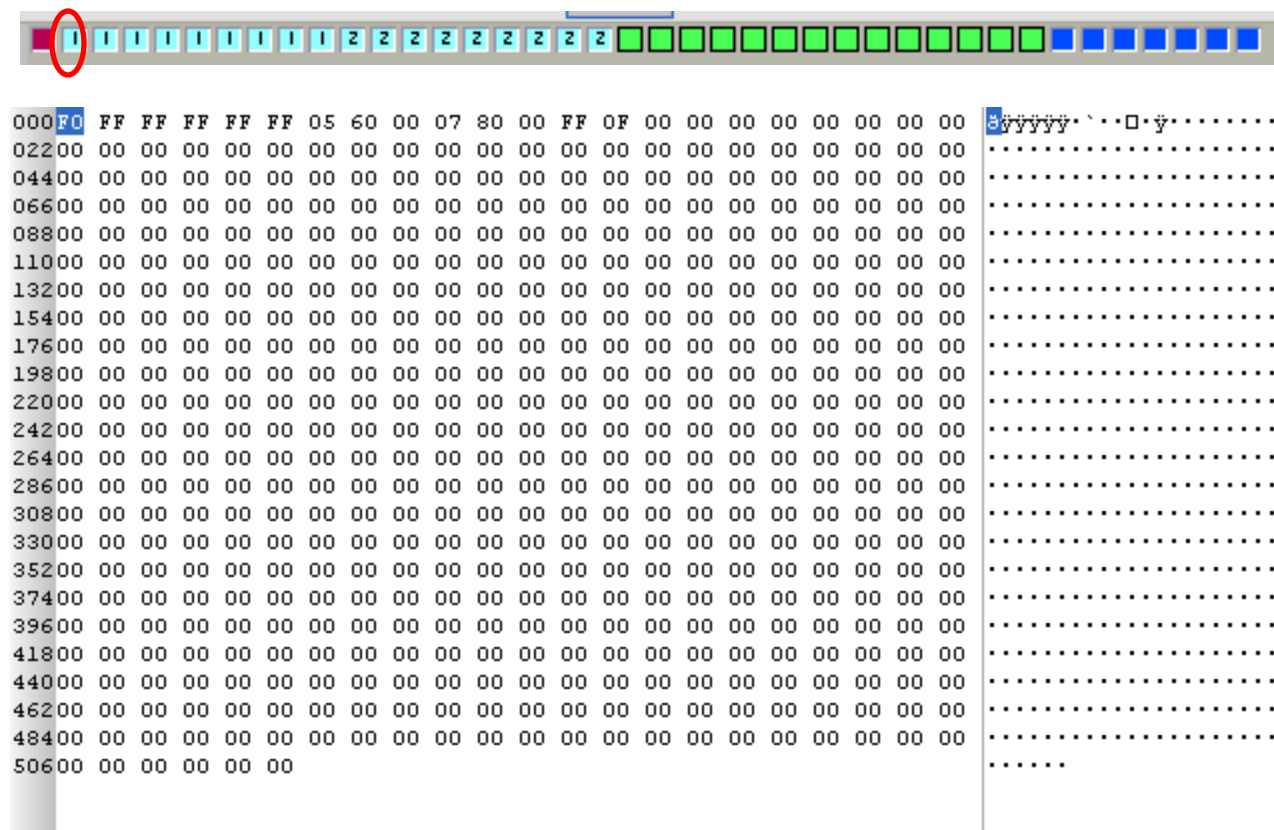

MBR first 512 bytes

FAT 1 first 512 bytes

- Notice it is a duplicate

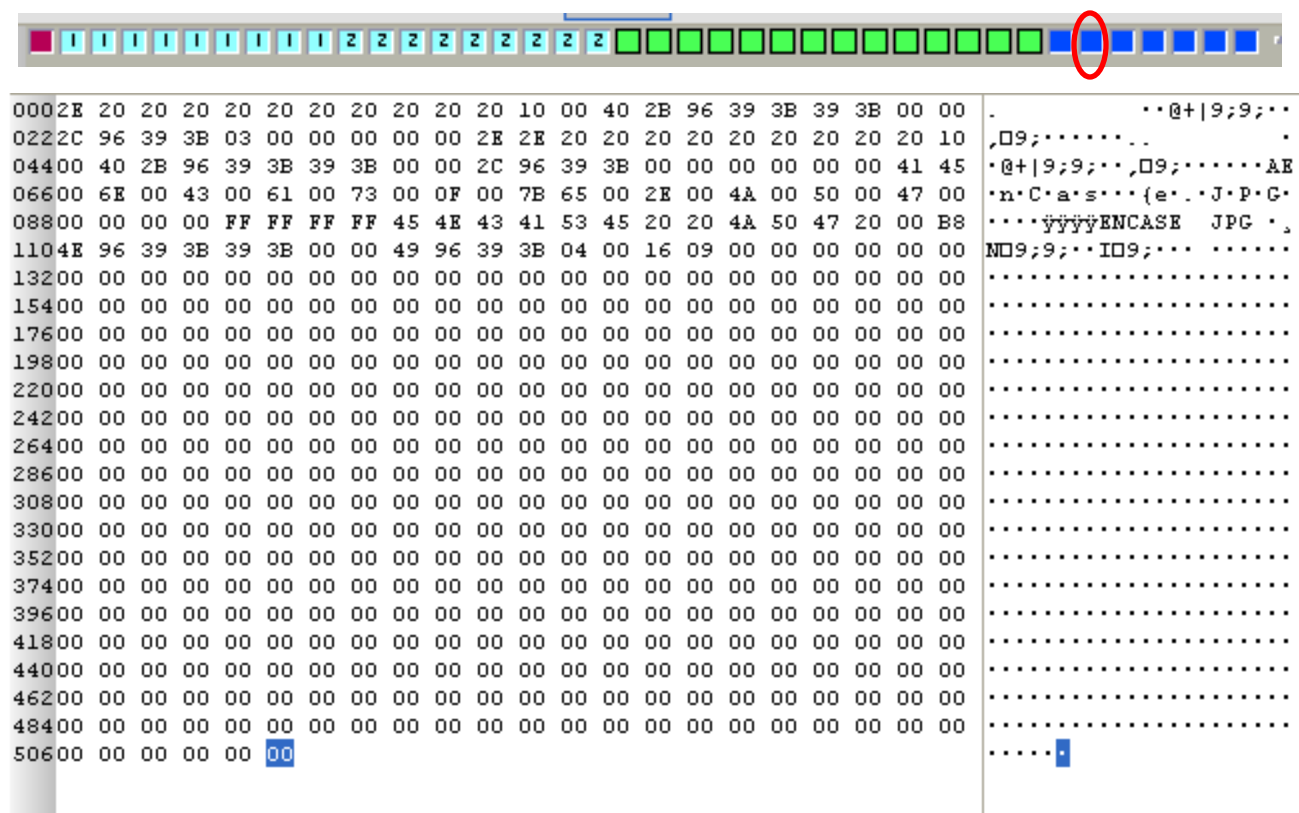

FAT 12 Root Directory

The diagram shows a horizontal bar representing the FAT 12 Root Directory. It consists of 24 colored squares. The first 12 squares are light blue, the next 12 are light green, and the last 12 are dark blue. A red circle highlights the 12th square (light green), which corresponds to the 12th entry in the table below.

Sub directory with one file inside

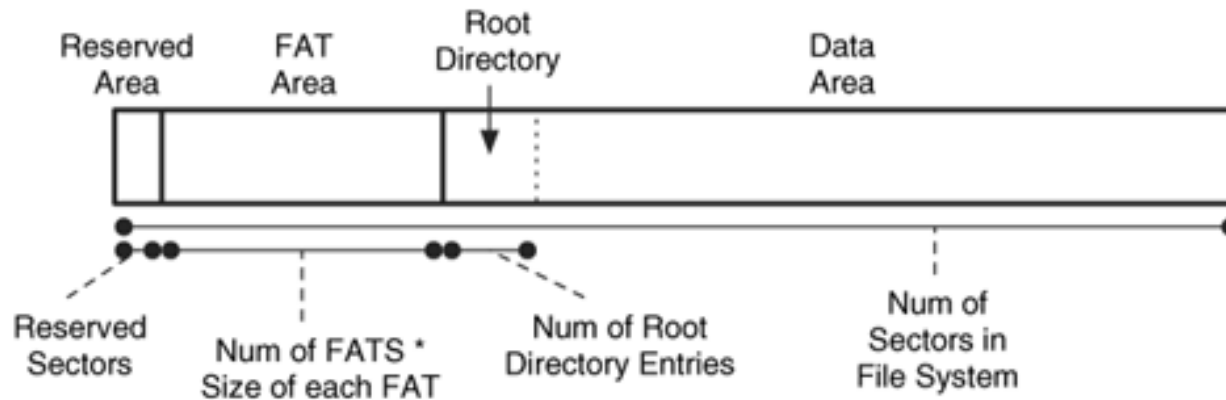

- First sector for JPG image data

FAT 12/16 Structure

. FAT file system layout and data from the boot sector that is used to calculate the locations and sizes.

FAT12/16

MBR first 512 bytes

Table 10.2. Data structure for the remainder of the FAT12/16 boot sector.

Byte Range	Description	Essential
0–35	See Table 10.1 .	Yes
36–36	BIOS INT13h drive number.	No
37–37	Not used.	No
38–38	Extended boot signature to identify if the next three values are valid. The signature is 0x29.	No
39–42	Volume serial number, which some versions of Windows will calculate based on the creation date and time.	No
43–53	Volume label in ASCII. The user chooses this value when creating the file system.	No
54–61	File system type label in ASCII. Standard values include "FAT," "FAT12," and "FAT16," but nothing is required.	No
62–509	Not used.	No
510–511	Signature value (0xAA55).	No

MBR first 512 bytes

Table 10.1. Data structure for the first 36 bytes of the FAT boot sector.

Byte Range	Description	Essential
0–2	Assembly instruction to jump to boot code.	No (unless it is a bootable file system)
3–10	OEM Name in ASCII.	No
11–12	Bytes per sector. Allowed values include 512, 1024, 2048, and 4096.	Yes
13–13	Sectors per cluster (data unit). Allowed values are powers of 2, but the cluster size must be 32KB or smaller.	Yes
14–15	Size in sectors of the reserved area.	Yes
16–16	Number of FATs. Typically two for redundancy, but according to Microsoft it can be one for some small storage devices.	Yes
17–18	Maximum number of files in the root directory for FAT12 and FAT16. This is 0 for FAT32 and typically 512 for FAT16.	Yes
19–20	16-bit value of number of sectors in file system. If the number of sectors is larger than can be represented in this 2-byte value, a 4-byte value exists later in the data structure and this should be 0.	Yes
21–21	Media type. According to the Microsoft documentation, 0xf8 should be used for fixed disks and 0xf0 for removable.	No
22–23	16-bit size in sectors of each FAT for FAT12 and FAT16. For FAT32, this field is 0.	Yes
24–25	Sectors per track of storage device.	No
26–27	Number of heads in storage device.	No
28–31	Number of sectors before the start of partition. ^[1]	No
32–35	32-bit value of number of sectors in file system. Either this value or the 16-bit value above must be 0.	Yes

Signature value (0xAA55).

Directory Entry Structure

The screenshot displays a file system viewer interface. The sidebar on the left contains navigation options: Home, Entries, Bookmarks, Search Hits, Records, Devices, Secure Storage, Keywords, File Extents, Permissions, References, and Hash Properties. The main area shows a list of directory entries with their offsets (e.g., 0000, 0058, 0116, etc.) and a corresponding hex dump. The hex dump shows the raw data of the directory entries, including file names and attributes.

Offset	Hex Data	Text Representation
0000	41 74 00 65 00 73 00 74 00 66 00 0F 00 8C 6F 00 6C 00 64 00 65 00 72 00	At·e·s·t·f···o·l·d·e·r·

Directory Entry Structure

- Each file will have at least one directory entry called (basic directory entry).
 - File name in ASCII.
 - MAC Times/Dates.
 - File Size.
- If the file is longer than 8 characters in name or in different language than English it will have another one or more entries called long file name entry written in UNICODE.

Directory Entry Structure (Basic Entry)

Table 10.5. Data structure for a basic FAT directory entry.

Byte Range	Description	Essential
0–0	First character of file name in ASCII and allocation status (0xe5 or 0x00 if unallocated)	Yes
1–10	Characters 2 to 11 of file name in ASCII	Yes
11–11	File Attributes (see Table 10.6)	Yes
12–12	Reserved	No
13–13	Created time (tenths of second)	No
14–15	Created time (hours, minutes, seconds)	No
16–17	Created day	No
18–19	Accessed day	No
20–21	High 2 bytes of first cluster address (0 for FAT12 and FAT16)	Yes
22–23	Written time (hours, minutes, seconds)	No
24–25	Written day	No
26–27	Low 2 bytes of first cluster address	Yes
28–31	Size of file (0 for directories)	Yes

Directory Entry Structure – Long File Name

Table 10.7. Data structure for an LFN FAT directory entry.

Byte Range	Description	Essential
0–0	Sequence number (ORed with 0x40) and allocation status (0xe5 if unallocated)	Yes
1–10	File name characters 1–5 (Unicode)	Yes
11–11	File attributes (0x0f)	Yes
12–12	Reserved	No
13–13	Checksum	Yes
14–25	File name characters 6–11 (Unicode)	Yes
26–27	Reserved	No
28–31	File name characters 12–13 (Unicode)	Yes
